AROHA — Brand Identity Guidelines

Rise with the Sun.

A compact reference for the supplied logo geometry, approved colours and exported brand assets.

1. Core identity

AROHA combines a rising sun with abstract mountain/rooftop geometry. The visual language is geometric, minimal and optimistic. The supplied vector masters are the source of truth for all exports.

2. Colour palette

Colour	HEX	Use
Forest green	#073F32	Primary wordmark and symbol
Solar amber	#E6A43A	Sun element / energy accent
Warm ivory	#F7F5EF	Preferred light background
Charcoal	#111111	Monochrome option
White	#FFFFFF	Dark-background option

3. Logo variants

Use the full-colour horizontal lockup as the primary signature. Use monochrome variants only when colour reproduction is constrained or a single-colour application is required. Use the standalone symbol for app icons and favicons.

4. Clear space and minimum size

Preserve clear space around the complete logo; do not crop, stretch, skew or independently reposition the symbol, wordmark or tagline. No tested minimum reproduction size was supplied, so establish one through actual print and screen testing rather than assuming a numeric threshold.

5. Typography

The wordmark and tagline are outlined vector paths. The tagline construction reference specifies Montserrat Medium (500), tracking 0.22em, additional word spacing of +0.24em, and cap height 106 units. Do not substitute a live font in the logo artwork.

6. Technical construction

See CONSTRUCTION_SPECIFICATIONS.md for the full symbol and wordmark measurements transcribed from the supplied construction sheets. Use the SVG masters for all scaling and downstream exports.

7. File selection

SVG: preferred for web, print and scalable use. PNG: for applications requiring raster artwork. ICO/PNG favicon files: browser and device icon use. App icon SVG/PNG files: square icon applications with their specified background colours.

8. Source and QA

The original supplied construction diagrams, master reference PNGs and draft SVGs are retained in 08_SOURCE_FILES. Refer to ASSET_AUDIT.md and QA_REPORT.md for provenance and checks performed.
